

**STRENGTHENING**  
the climate resilience of  
ecosystems and  
marginalized  
communities vulnerable  
to climate change.

Applying  
**NATURE-BASED  
CLIMATE SOLUTIONS**  
at six selected wetland  
sites in the Lake Chad  
Basin wetlands of  
Cameroon, Chad & Niger.

Increasing  
**LEADERSHIP OF  
WOMEN & YOUTH**  
in environmental  
peacebuilding around  
selected wetland sites  
and in the existing regional  
stabilization process.

The Lake Chad Basin Conservation Project aims to enhance the climate resilience of ecosystems and marginalized communities structurally vulnerable to climate change. With a focus on women and youth, the project team will apply nature-based climate solutions to six Lake Chad Basin Ramsar wetland sites in Cameroon, Chad and Niger.

An environmental peacebuilding approach and the application of Indigenous knowledge and practices will help reduce local conflict related to use and access of resources.
